F5
Age:32

City: Pretoria
Gender: Male
Ethnicity: African

He completed a National Diploma in Information Technology and has 9 years programming experience as a Full Stack developer using mostly C#, JavaScript and .net. His current strength is Front End Development using mostly Angular and other front-end language as listed in his grid further below.

Experienced in developing Gaming applications, insurance, and financial applications as well as Crypto. He has experience with integrations in REST and API end points, software architecture experience including design patterns and SOLID principles.

Furthermore, he has Development Team lead experience, and his role as a Software Developer over the years has enabled him to conceive, create, and deploy tailored, highly responsive, and scalable solutions employing cutting-edge technologies. In addition, he has consistently exceeded client expectations and achieved project milestones, adeptly navigating deadline-driven environments.

Work History

Position: Senior Frontend Developer / Angular   **Duration: 2022 to Current**
Company: Automotive sector

- AI-Enhanced Frontend Development: Leverage AI technologies to create responsive and user-friendly interfaces that facilitate efficient vehicle quality assurance and distribution.
- Agile Methodology Implementation: Work within an Agile framework to rapidly adapt to changes, collaborating closely with cross-functional teams to continuously enhance the consumer experience.
- Kubernetes Deployment Expertise: Apply extensive knowledge of Kubernetes to orchestrate the seamless deployment and scaling of applications, optimizing efficiency and reliability.
- Quality Assurance Integration: Collaborate with AI and QA teams to integrate advanced quality assurance processes into the frontend, ensuring vehicles meet high standards before reaching consumers.
- Consumer-Centric Focus: Prioritize the end-user experience, designing interfaces that provide intuitive insights into vehicle quality and features, ultimately enhancing consumer confidence and satisfaction.

Technologies:
- Angular
- NGRX Component store
- Argocd
- Kubernetes
- helm charts
- Devops
- C# web apis
- microservices
- CQRS
- docker

Reason for leaving:

- He would prefer a full-time role and would love to have more responsibilities in a dual role as Team lead and hands-on Front-end developer, it's the next step in his career.

Position: Senior Frontend Developer / Angular   **Duration: 2021 to 2022**
Company: IT (Information Technology) sector.
Project 1:
- Orchestrated end-to-end website development, taking projects from conceptualization to deployment.
- Evaluated UX and UI designs (utilizing Figma) for their technical viability and alignment with development goals.
- Engaged collaboratively with product team members to execute innovative feature enhancements.
- Conducted comprehensive assessments of requirements in collaboration with Business Analysts.
- Coordinated with the JAVA team to determine and finalize the optimal API structure.
- Elevated product quality through rigorous code reviews, the creation of unit tests, and active collaboration with QA teams.
- Enforced clean and readable code standards, adhering to best practices for maintainable software development.
- Delivered features within the context of a 2-week sprint cycle, efficiently managing tasks through Jira.

Technologies:
- Angular
- Material
- Rxjs
- ngrx

Reason for leaving:
- He was a consultant, once the project was completed, he was benched and got bored and decided to accept a new role.

Position: Senior Full Stack JavaScript   **Duration: 2019 to 2020**
Project 1:
- Transformed concepts into operational websites, mobile apps, and landing pages, overseeing the entire deployment process.
- Designed the architecture of a web app from inception to completion, ensuring a robust foundation.
- Collaborated with a C# developer to create RESTful APIs using NestJS and microservices, enhancing application functionality.
- Established an end-to-end CI/CD pipeline on Azure for all existing applications, streamlining deployment workflows.
- Guided and supervised 2 front-end developers, conducting code reviews and task assignments to ensure quality work.
- Maintained comprehensive documentation for applications using Atlassian Confluence, ensuring clarity and accessibility.
- Worked closely with Testers to implement testing suites via Selenium, enhancing app reliability.
- Developed and managed an insurance onboarding bot, optimizing user engagement.
- Oversaw all frontend app deployments, ensuring smooth and efficient release processes.
- Kept the business informed about ongoing sprints in adherence to Agile methodology, promoting transparency and alignment.

Technologies:
- ReactJS
- Typescript
- C#
- Material UI
- Angular
- NestJS
- .Net Core v3.1
- ngrx

Reason for leaving:
- The company was acquired by another organization, which led to a major restructuring. As a result, his entire team left, and he felt it was best to move on as well.

Position: NodeJS & Angular Developer   **Duration: 2018 to 2018**
Company: Administrative services and Consulting sector
Project 1:

- Crypto Wallet Maintenance: Ensure the smooth functioning and security of the crypto wallet application, addressing bugs, glitches, and performance issues promptly to maintain a reliable user experience.
- Cryptocurrency Integration: Collaborate with third-party cryptocurrency providers to seamlessly integrate their APIs and services into the wallet, enabling users to manage various cryptocurrencies within the application.
- Programming Proficiency: Utilize Node.js and AngularJS to develop, enhance, and optimize features of the crypto wallet application, ensuring efficient and responsive user interfaces.
- Linux Expertise: Manage and maintain the application's infrastructure on Linux servers, ensuring high availability, security, and efficient utilization of resources.
- DevOps Implementation: Employ DevOps practices to automate deployment, testing, and monitoring processes, ensuring continuous integration and delivery of updates to the crypto wallet application.

Technologies:
- AngularJS
- NodeJS
- PHP
- Nativescript
- Angular

Reason for leaving:
- Company liquidated.

Position: API Developer   **Duration: 2017 to 2018**
Company: Financial technology (fintech) sector
Project 1:
- Third-Party Integrations: Collaborate with external service providers to seamlessly integrate their APIs and functionalities into the application, ensuring smooth data exchange and communication.
- Secure Payment Flows: Implement robust and secure payment processing workflows, adhering to industry standards and best practices to safeguard sensitive financial information.
- Programming Expertise: Utilize C# to develop and enhance application features, leveraging its capabilities for efficient code execution and system performance.
- Web API Development: Create and maintain Web APIs to facilitate communication between different components, allowing seamless data exchange and interaction.
- Database Management: Utilize SQL and SQL stored procedures to manage and manipulate data within the application's database, ensuring efficient storage, retrieval, and manipulation of information.

Technologies:
- C#
- web API 2
- SOAP
- SQL server

Reason for leaving:
- Moved back to Gauteng.

Position: Web Developer   **Duration: 2015 to 2017**
Company: Insurance sector
Project 1:
- Doing Full stack development using C# and JavaScript.
- Game Development: Create interactive and educational games using Unity3D, AngularJS, HTML, and CSS, aligning with the app's objectives and user engagement.
- Front-End and Back-End Integration: Design user-friendly interfaces with AngularJS, HTML, and CSS, while integrating game mechanics with backend systems using C#.
- Database Management: Develop and manage a MySQL database to store user profiles, scores, and achievements, prioritizing data security and user privacy.
- Gamification Strategies: Apply gamification techniques like rewards, badges, and leaderboards to encourage user engagement and learning, enhancing the overall experience.
- Quality Assurance and Feedback: Test and debug games, gather user feedback, and collaborate with the team to improve gameplay, ensuring a high-quality and user-centric app.

Reason for leaving:
- Offered a better opportunity where he would work with more market-related languages.

Position: Intern Web Developer   **Duration: 2015 to 2015**
Company: Educational and Technology sector
- Game Development: Create interactive and educational games using Unity3D, AngularJS, HTML, and CSS, aligning with the app's objectives and user engagement.
- Front-End and Back-End Integration: Design user-friendly interfaces with AngularJS, HTML, and CSS, while integrating game mechanics with backend systems using C#.
- Database Management: Develop and manage a MySQL database to store user profiles, scores, and achievements, prioritizing data security and user privacy.
- Gamification Strategies: Apply gamification techniques like rewards, badges, and leaderboards to encourage user engagement and learning, enhancing the overall experience.
- Quality Assurance and Feedback: Test and debug games, gather user feedback, and collaborate with the team to improve gameplay, ensuring a high-quality and user-centric app.

Reason for leaving:
- It was an internship, he applied for a Junior Software development role which he secured.

Education

Grade 12. Vaal High school, 2010.

National Diploma in Information Technology. Vaal university of Technology, 2015.
