Project worked on: Mzansi stock - <http://www.mzanistock.co.za>

Work History

Position: Front end Developer

Duration: 2022 to Current

Company: Financial services sector

- Doing front end development using Angular, Bootstrap, CSS, Angular, JavaScript, Typescript, jQuery and she also uses Azure DevOps tools.
- They deal with architecture and every step of the project they must document processes etc.
- Analyze user and technical requirements.
- Create innovative, scalable, fault-tolerant software solutions for clients and customer base.

- Work closely with project managers, UX designers, other developers, systems analysts, graphic artists, and sales and marketing professionals.
- Mentoring intern developers assisting them with development work and managing their outputs.
- Write and test code to ensure compatibility and stability: refine and rewrite, as necessary.
- Create clear technical specifications.
- Expand existing software to meet the changing needs of our key demographics.
- Modifying software to fix errors, adapt it to new hardware, improve its performance, or upgrade interfaces.
- Working with customers or departments on technical issues including software system design and maintenance.
- Designing and developing software systems using scientific analysis and mathematical models to predict and measure outcomes and design consequences.
- Conferring with project managers to obtain information on limitations or capabilities.

Reason for leaving:

- Initially during the interview for this role, she was told it would be a Hybrid role and at first it was, however shortly after starting the role became fully Office bound which she didn't entirely mind, however last year in 2023 she was very ill and did not want to take lots of time off from work and requested to work remotely for a few weeks until she is recovered but the company simply informed her that they're a big corporate and can't bend the rules for anyone thus she had to either work in office or take formal sick leave or paid/unpaid leave until she's able to be fully back in office.
- She just feels although it was amazing to gain experience in a reputable corporate like this company, she does not like just being a number and prefers working for companies that value the person.

Position: Front end Angular Developer

Duration: 2020 to 2022

Company: IT and Software sector

- She was outsourced to various Insurance companies' clients of Dotcom's doing front end development in mostly Angular technologies, also using C#, and ASP.net core on the back end.
- They were grooming her to become a full stack developer in C# so that she's not limited to front end only.
- She was doing C# back end and full stack development.
- Mentoring intern developers assisting them with development work and managing their outputs.
- Develop user-facing features using Angular framework and other web technologies.
- Collaborate with UX/UI designers to translate Prototypes into responsive web applications.
- Implement and maintain reusable components and libraries for future use.
- Optimize application performance to ensure fast and efficient user experience.
- Work closely with backend developers to integrate frontend components with server-side logic.
- Working on Library Project where to deploy code using versioning in nexus to consume others.
- Troubleshoot and debug issues reported by users or QA team and provide timely resolutions.
- Working closely with cross-functional teams to deliver high-quality software solutions that meet our client's needs.
- understanding and implementing user requirements, optimizing application performance and ensuring code quality through testing

Technologies:

- Java Script
- Html 5
- CSS 3
- JQuery
- Bootstrap
- Angularj 2
- Angularj 4
- Angularj 5
- Angular 6
- Angular 7
- Angular 8
- Angular 9
- Angular 10
- Angular 11
- Angular 12
- ReactJS typescript
- ASP.NET, Azure Devops

Database:

- MongoDB
- UMbroco CMS

Server:

- Node.js

Source Control:

- Git commands, Git extensions
- Tools Used:
- Visual Studio Code, visual studio
- RESTful API's
- Agile Environment

Reason for leaving:

- Headhunted by a company which she thought would be great to add a reputable corporate bank to her CV.

Position: Web Developer

Duration: 2017 to 2020

Company: Logistics and Transportation sector

- Responsible for Front end development using Angular JS, Angular 2, Angular 4, HTML5, CSS, Bootstrap and JQuery, JavaScript, and Typescript
- Developed in-house web applications and out-source web applications of which are usually supported by back-end web developer, who are responsible for server-side application logic and integration of the work he does as a Front-End Developer.
- Links together the world of design and technology, packaging up the utility of the back end in an inviting way for users to interact with.
- Responsible for implementing and designing visual elements that users see and interact with in a web application.
- Monitors website performance, watch for traffic drops related to site usability problems and rectify the issues.
- Reviews the web app and feature coding and plan future website upgrades with the development team.
- Implement responsible web design principles to ensure that our company website renders well across multiple devices.
- Test and maintain.
- Mentoring intern developers assisting them with development work and managing their outputs.

Reason for leaving:

- She worked here for almost 3 years and wanted a new challenge as she was working on one project and wanted to work on multiple projects.

Position: Front End Developer (Web & Mobile)

Duration: 2016 to 2017

Company: Telecommunications sector

- Design static websites.
- Develop and design mobile applications.
- Design and develop web application functionalities, test and maintain.

Reason for leaving:

- Internship completed, and she wanted to secure a full-time role.
